

+++ Nuclear Power Makes **Less Jobs** +++

Jobs? Wind power beats nuclear!

Nuclear power is capital intensive while renewable forms of energy are labour (job) intensive. For example, in Germany in 2002 some 30,000 people were employed in the nuclear industry. On the other hand, more than 53,000 people are presently employed in the German wind power industry alone. Overall, the renewable energies industry in Germany has already secured 120,000 jobs despite its as yet only small share of power generation. Further expansion of renewable energies is adding new jobs on a daily basis.

Millions of new jobs could be created worldwide within the space of a few years by expanding the use of renewable forms of energy.

Shut down nuclear power plants.
